

Agentic AI for Work

Enterprises have spent decades investing in technology to increase efficiency. But they've missed the point.

They're caught in the efficiency trap

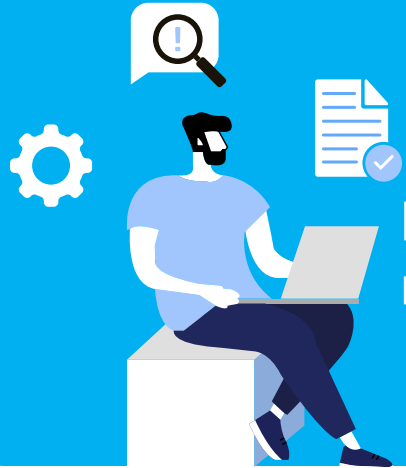

“Boosting efficiency is about more than managing immediate crises or getting the same amount of work done with fewer resources.”

McKinsey
State of Organizations 2023

“Knowledge workers reported spending nearly 29% of their week searching for the key information they need to do their work.”

Forrester's Crisis of a Fractured Organization Study

Unlocking Enterprise Productivity

**Efficiency is
not enough**

47% of knowledge workers still struggle to find information¹.

Enterprise leaders need to close knowledge and collaboration gaps to deliver productivity and unleash business value.

5%
of employees deliver

95%
of an organization's value.²

*How much value
could we deliver if we made every
employee a productivity star?*

**The
Opportunity**

Forrester predicts that knowledge workers can convert

12 Hours

of non-productive time into

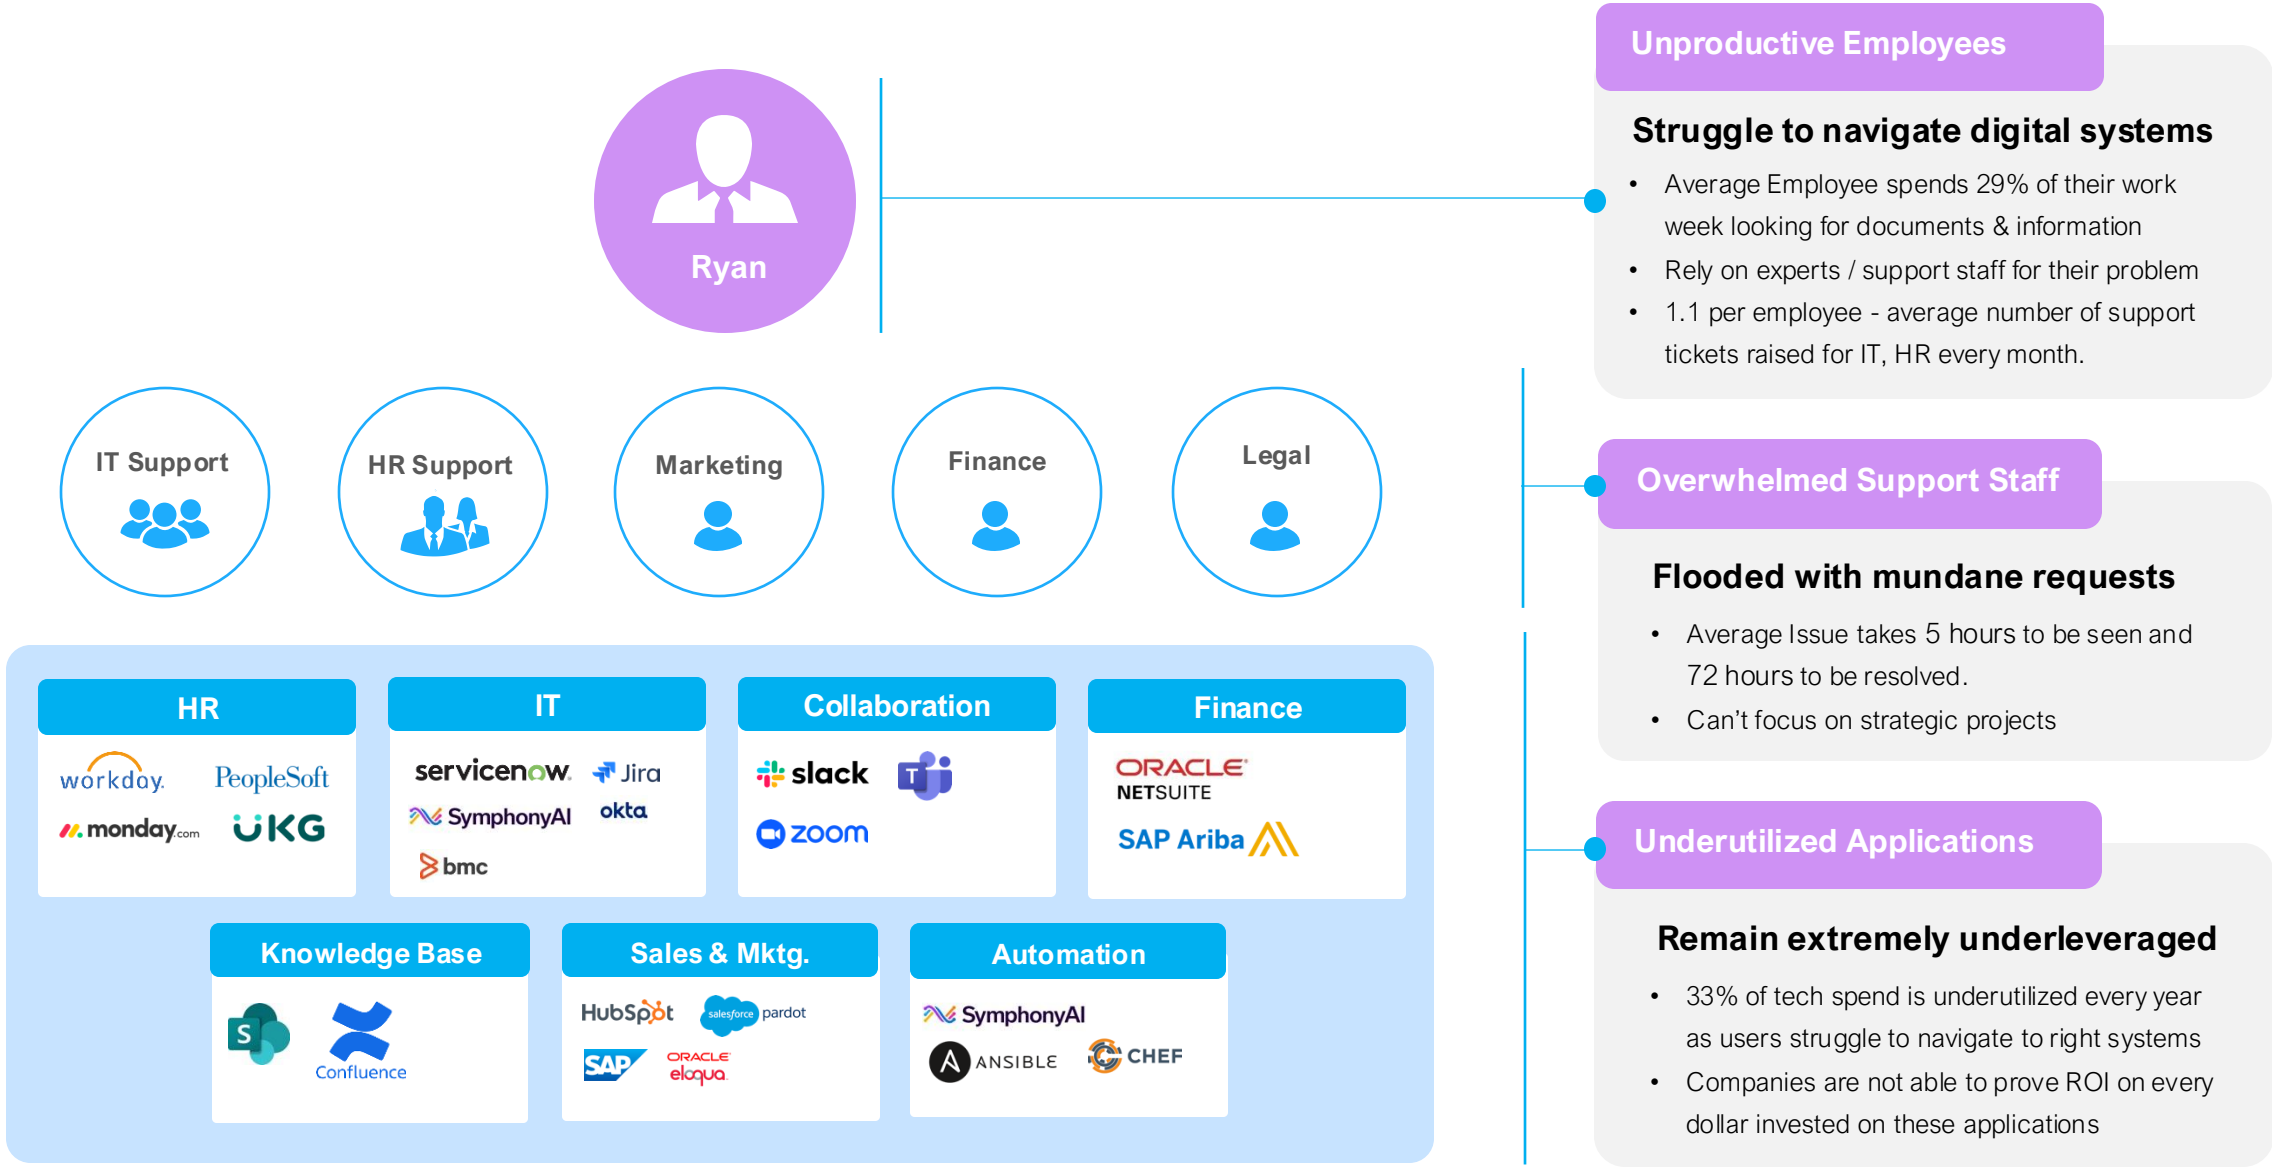

Core work Every week

The Current Disconnected State

The siloed and fragmented enterprise applications are leading to

Introducing **Agentic AI For Work**

Introducing Agentic AI For Work

The Agentic AI Employee Productivity Platform

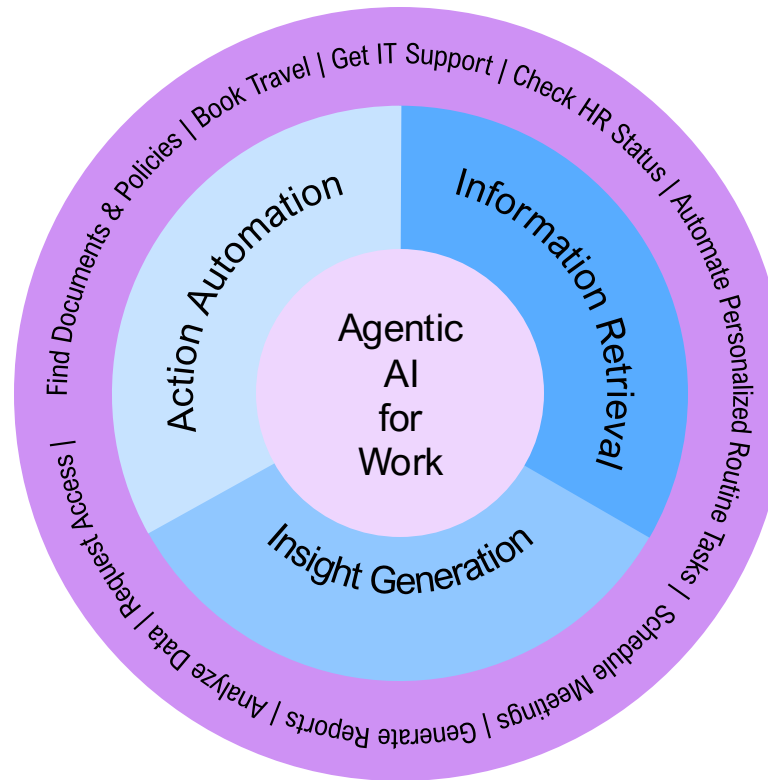

Our Next-generation, Agentic, *AI-native* Employee Productivity Platform combining:

Generative AI

Predictive AI

Deterministic Workflow Automation

AI and Workflow Orchestration & Integration

To Deliver:

Full-stack Enterprise Search

Multi-step Workflow Automation

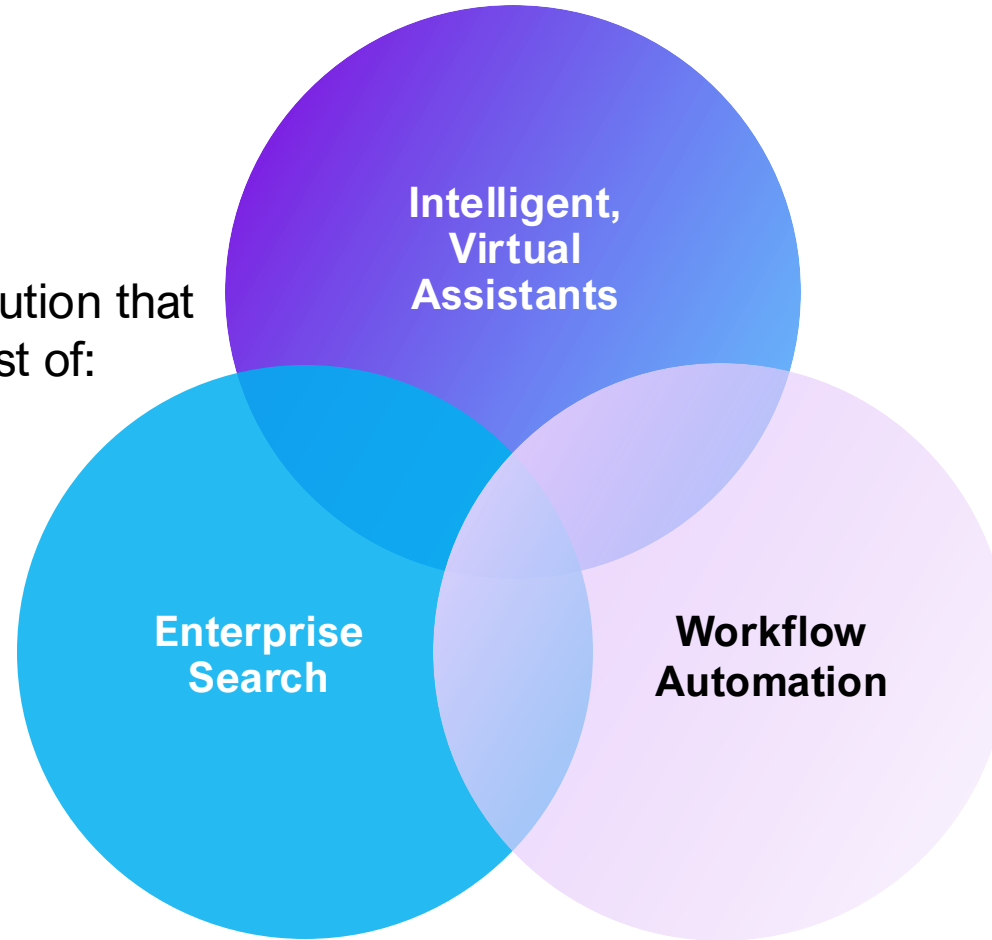

Proactive and Predictive Interactions

Collaborative AI-powered Workspaces*

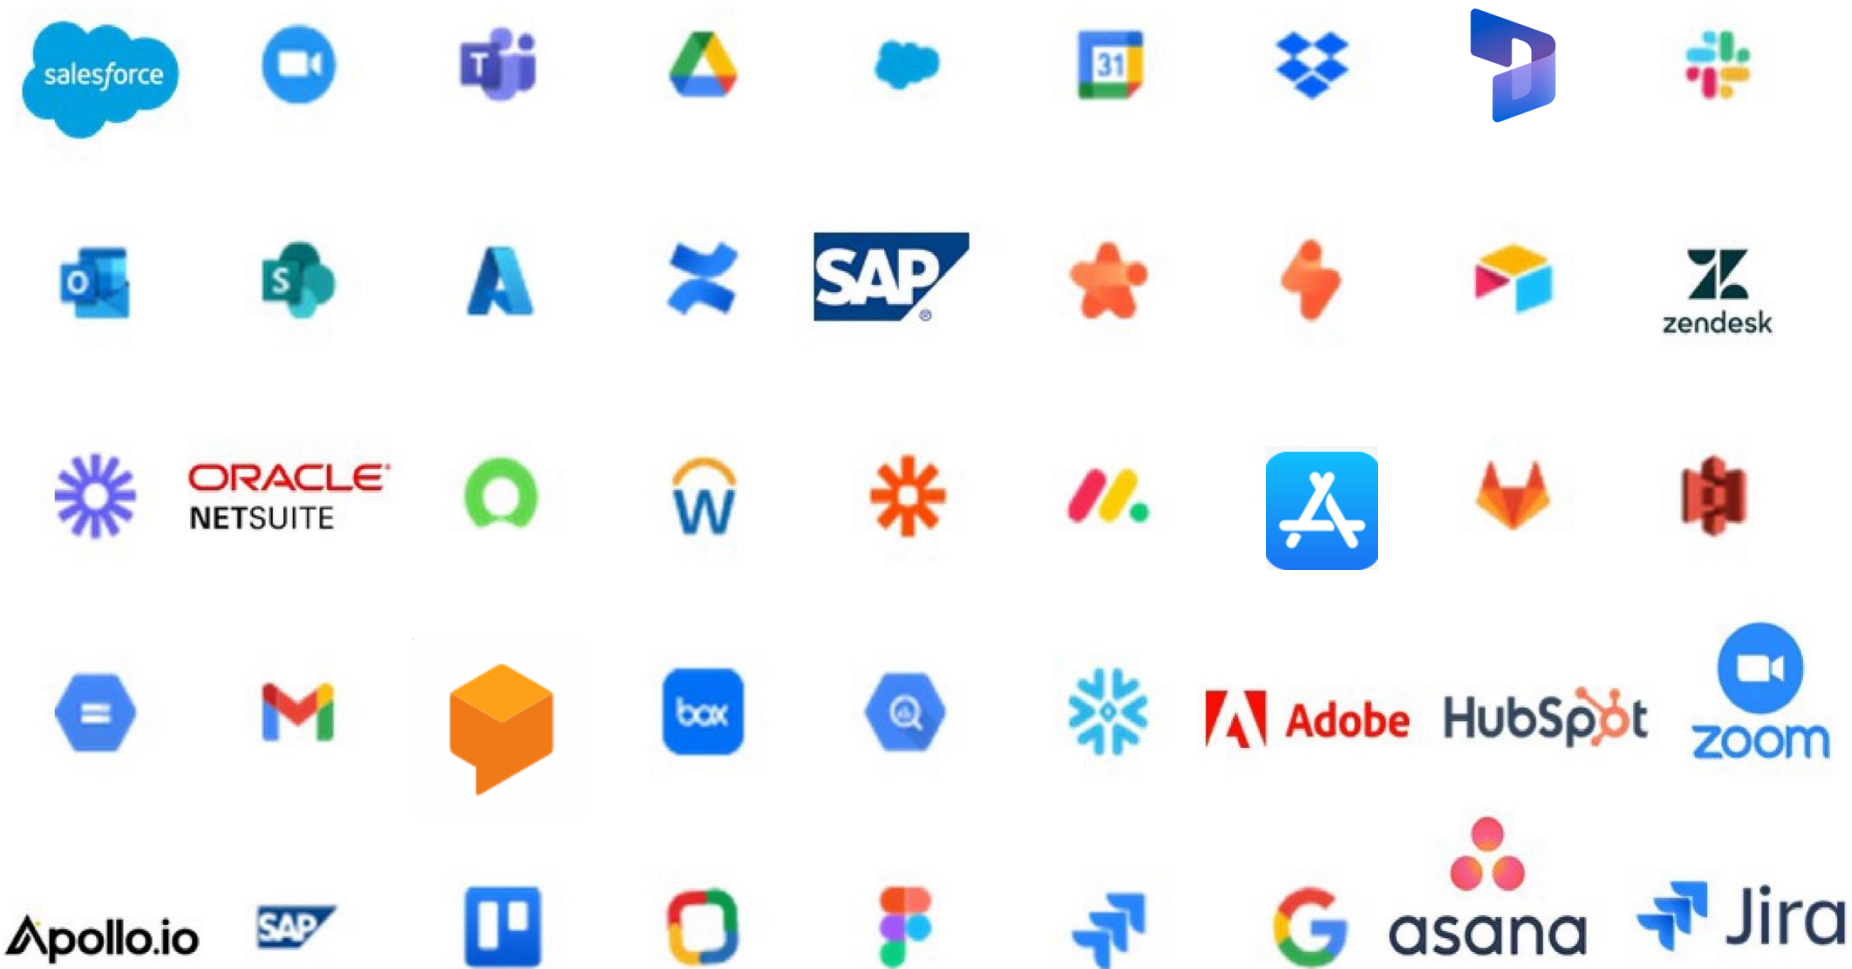

*In future releases

Introducing **Agentic AI For Work**

Resulting in a solution that
combines the best of:

Integrate with 1000+ Apps, 1500+ Runbooks and 100+ Recipes

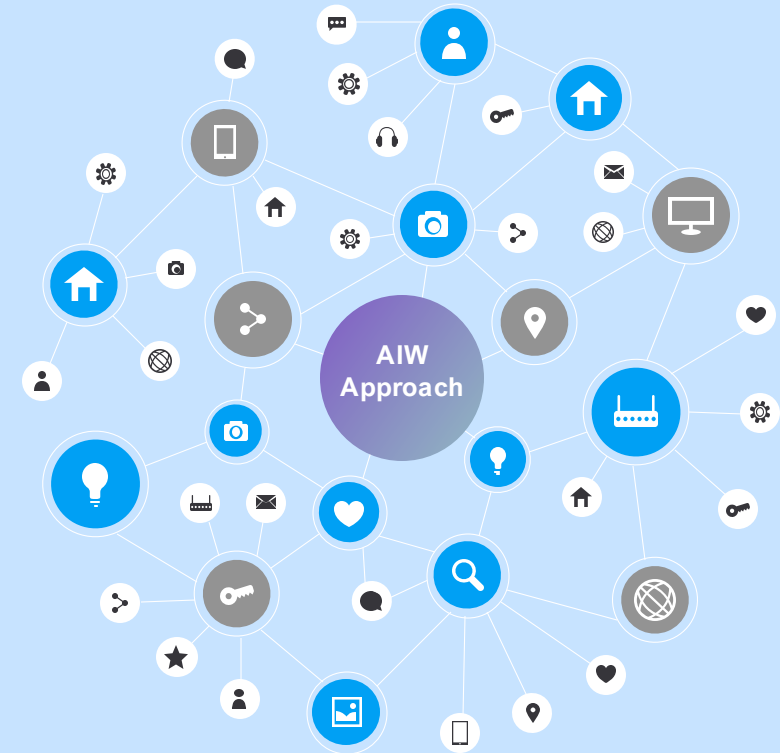

Navigate multiple platforms & switch between tabs

Get familiar with different apps & perform respective actions

Too much of time spent in the process

Many people are involved in the process

AIW Approach

Connected Multimodal
Interface across all applications

Interconnected Actions across all applications

How **AI For Work** Works

AI For Work's Cognitive Architecture

Our AI-native, Cognitive Architecture, combines and integrates key technology elements to deliver a technology-agnostic, seamless employee experience across all employee support use cases, including:

Mixture-of-Agents approach, purpose-built for employee support use cases

Context- and entitlement-aware Agent orchestration

Data abstraction layer:

- Graph database
- Vector database
- Semantic search
- API-based search

Combined to normalize, contextualize, and establish relationships between enterprise data elements

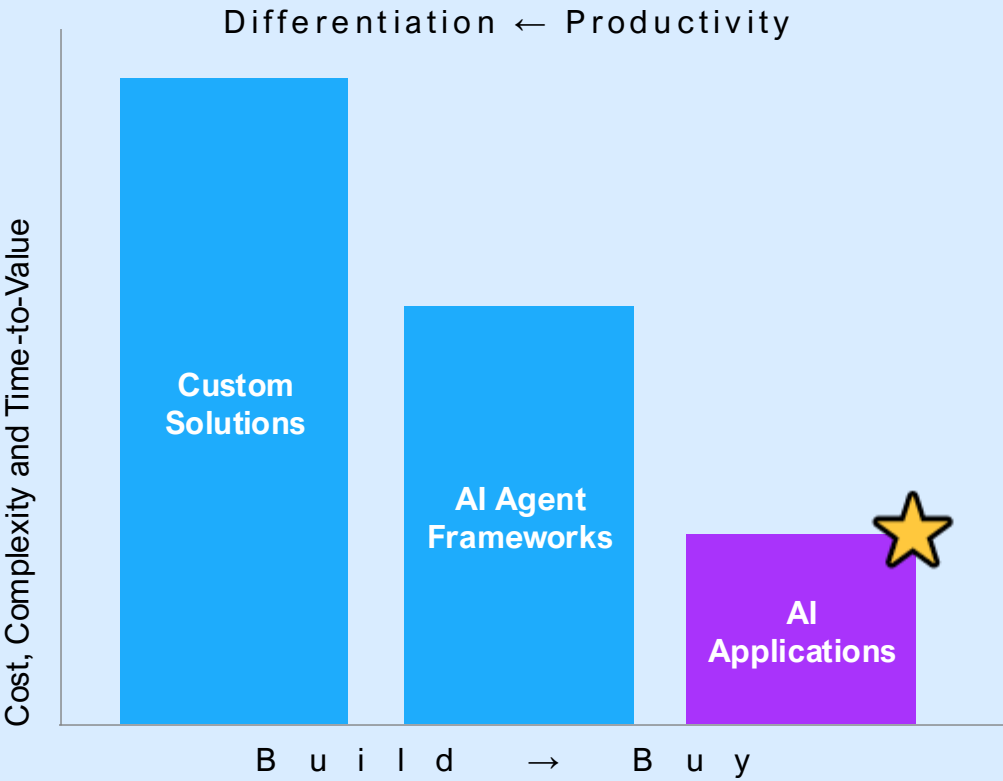

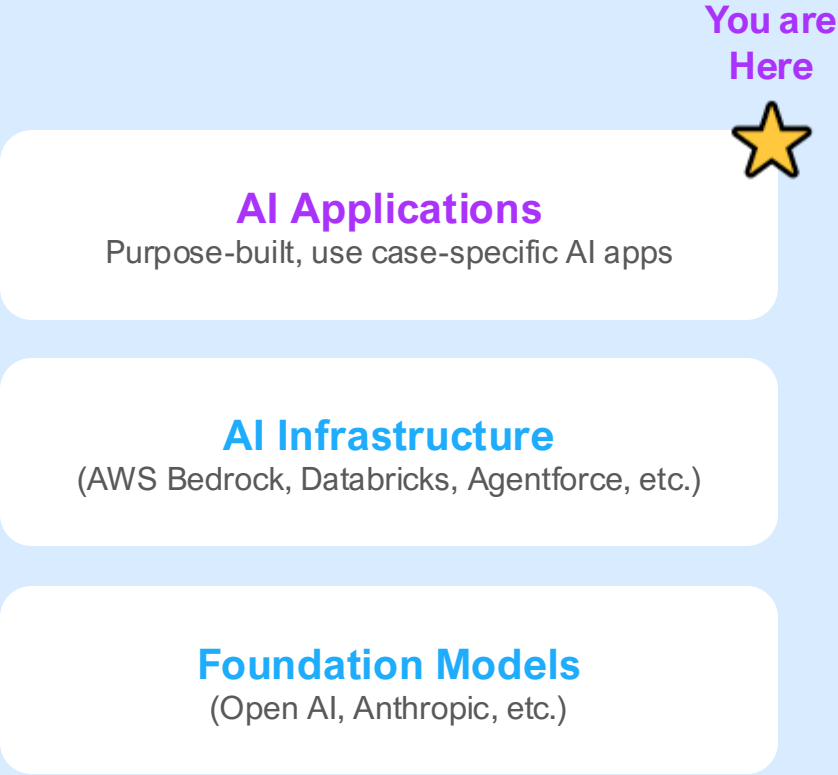

Built-in workflow automation and orchestration engine

Deep marketplace of pre-built data connectors, AI workflows, and automations

Where **AI for Work** Fits Into your AI Strategy

AI For Work's Strategic Fit

The **AI For Work** Future

AIW – Key Capabilities

Find information easily and quickly

Access information quickly and easily. across multiple systems, including HRMS, SharePoint, Intranets, CRM, marketing automation, and other systems of records

Automate routine tasks and save time

Automate routine tasks like schedule meetings, book travel or generate weekly CRM reports and more

Conversational experience

Integrated with MS Teams and purpose built for our business needs

Human like reasoning

The AI can think, take action, make recommendations, and summarize information in an easy-to-understand manner

Designed for scalability

Its machine learning and large language models are designed to scale, allowing you to expand use cases and support the needs of any function

Secure and Controlled

Highly secured, with built-in guardrails to ensure that your organization remains in control.
